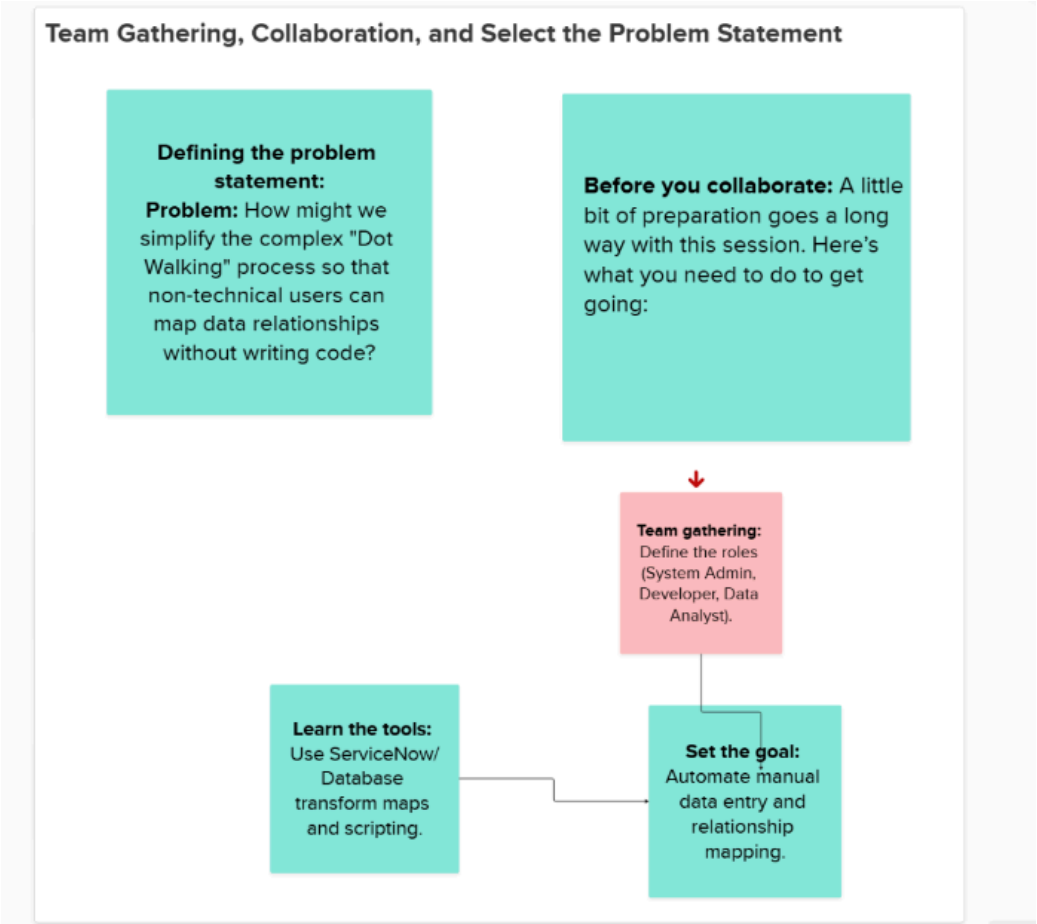
| Project Name | Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking |
| Maximum Marks | 4 Marks |

## Brainstorm & Idea Prioritization for Data Automation:

This brainstorming session is designed to break down the technical complexities of **Import Sets** and **Relationship Mapping**. By creating an open collaborative environment, our team aims to move beyond manual data entry and explore advanced automation logic. We prioritize discovering every possible "Dot Walking" scenario and field-mapping shortcut, ensuring that even the most complex data hierarchies can be navigated seamlessly.

Use this phase to challenge current manual limitations and envision a system where data flows into target tables with zero human intervention and perfect relational integrity.

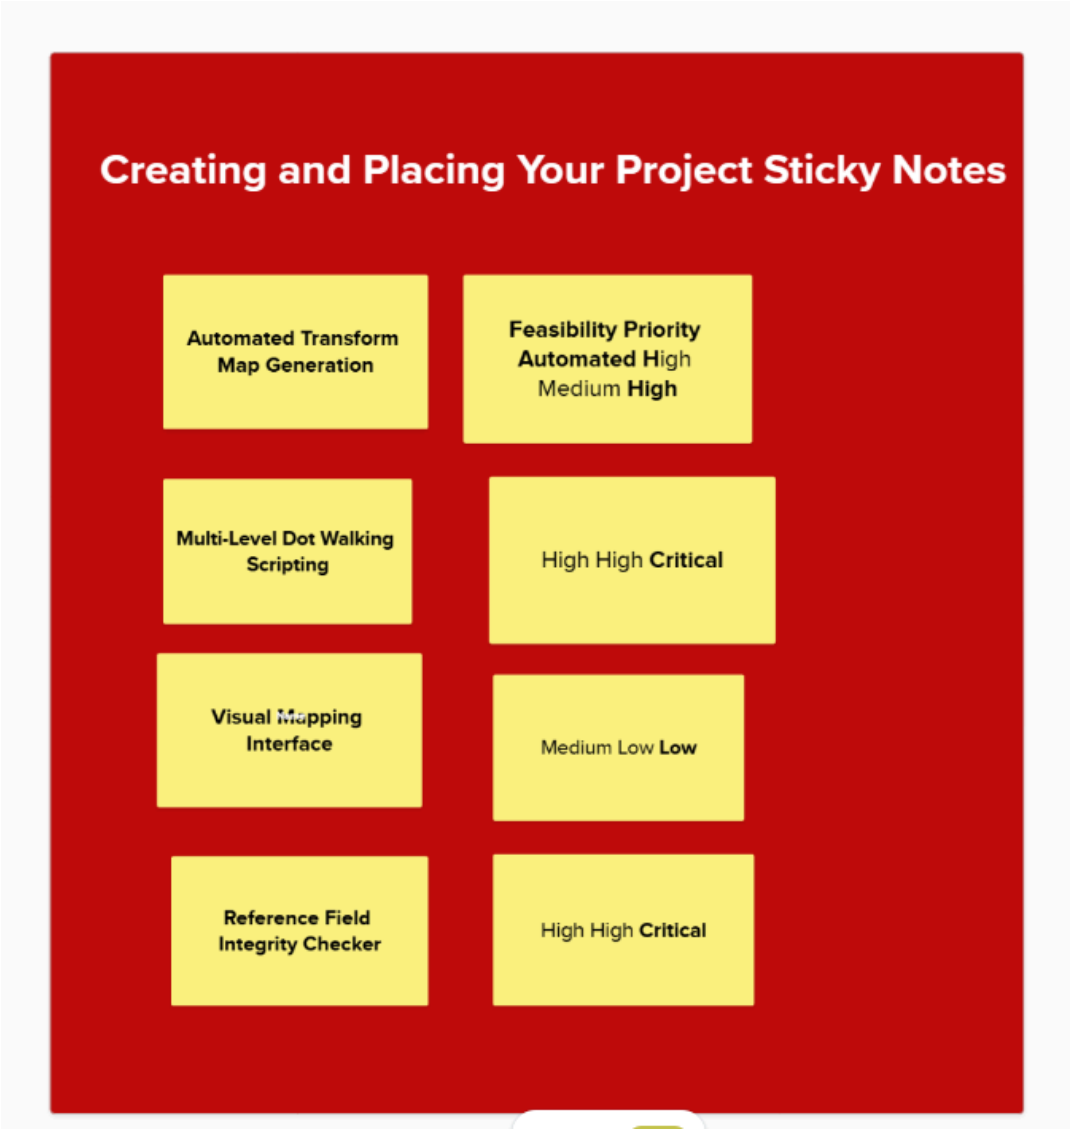
## Step-1: Team Gathering and Problem Selection



**Step-2: Brainstorm, Idea Listing, and Grouping**

**Automation:** Use AI to predict field mapping; Create "Auto-Mapping" templates for common Excel formats; Scripted REST APIs for real-time import.

**Data Integrity**Auto-validation of reference fields; Duplicate detection during staging; Pre-import data cleaning scripts.

**User Interface**Drag-and-drop Dot Walking builder; Visual relationship maps; "One-click" import history logs.


**Step-3: Idea Prioritization**
