Project Design Phase
Problem – Solution Fit Template

Date	05 April 2026
Team ID	**SWTID-2026-5577**
Project Name	Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking
Maximum Marks	2 Marks

Problem – Solution Fit Template:

In many organizations, data from external sources such as CSV or Excel files needs to be imported into systems like ServiceNow. However, this process is often manual, time-consuming, and prone to errors.

There is also a lack of proper relationship mapping between tables, making it difficult to retrieve connected data (such as displaying a user's department).

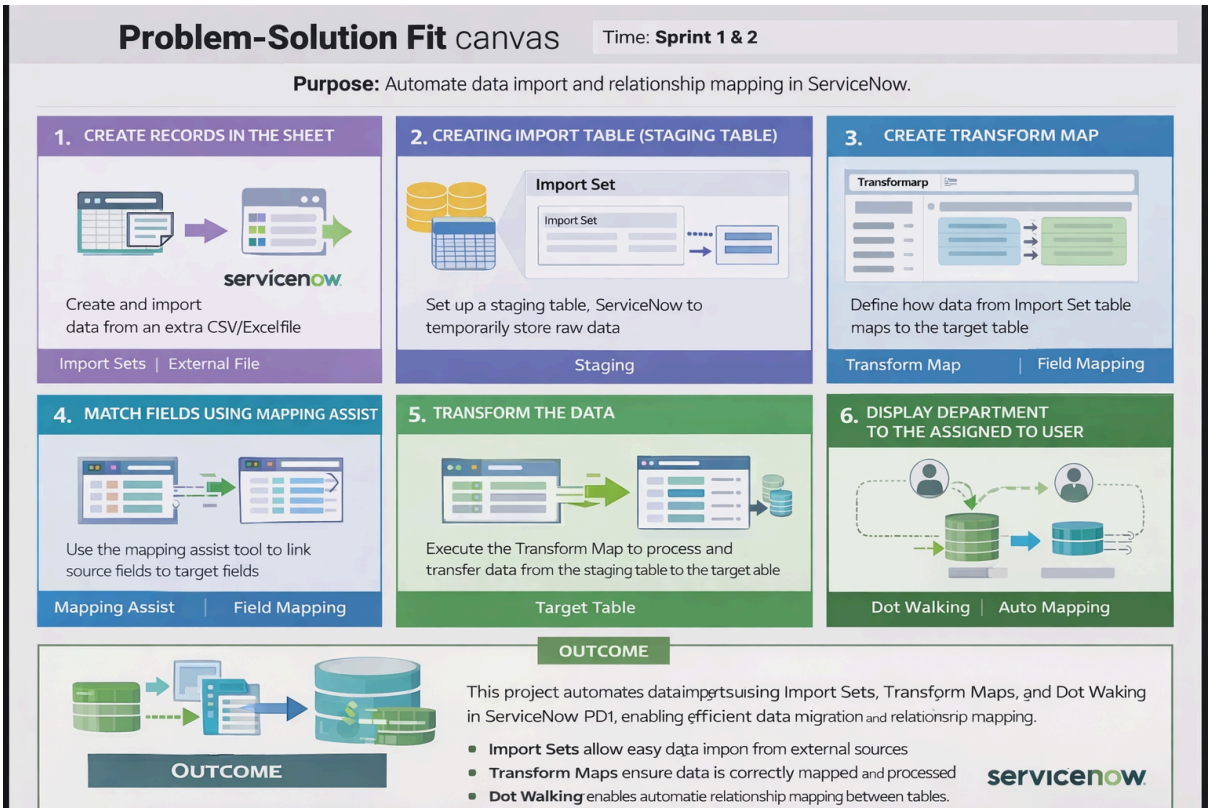
Because of this:

- Data duplication occurs
- Data consistency is not maintained
- Relationships between records are not clearly defined

Purpose:

- Solve data import challenges by automating the process using Import Sets and Transform Maps
- Improve data accuracy and consistency by reducing manual intervention
- Enable faster data migration using structured and scalable methods
- Enhance system efficiency by automating relationship mapping using Dot Walking
- Provide better data visibility by linking related records across tables
- Understand existing data handling issues and improve them with automation

Template:



Problem-Solution Fit canvas
Time: Sprint 1 & 2
Purpose: Automate data import and relationship mapping in ServiceNow.
1. CREATE RECORDS IN THE SHEET
servicenow
Create and import data from an extra CSV/Excelfile
Import Sets | External File
2. CREATING IMPORT TABLE (STAGING TABLE)
Import Set
Import Set
Set up a staging table, ServiceNow to temporarily store raw data
Staging
3. CREATE TRANSFORM MAP
Transformarp
Define how data from Import Set table maps to the target table
Transform Map | Field Mapping
4. MATCH FIELDS USING MAPPING ASSIST
Use the mapping assist tool to link source fields to target fields
Mapping Assist | Field Mapping
5. TRANSFORM THE DATA
Execute the Transform Map to process and transfer data from the staging table to the target able
Target Table
6. DISPLAY DEPARTMENT TO THE ASSIGNED TO USER
Dot Walking | Auto Mapping
OUTCOME
OUTCOME
This project automates dataimpertsuising Import Sets, Transform Maps, and Dot Waking in ServiceNow PD1, enabling efficient data migration and relationsrip mapping.
Import Sets allow easy data impon from external sources
Transform Maps ensure data is correctly mapped and processed
Dot Walking enables automatie relationship mapping between tables.
